Summary

Frontend engineer with 3.5 years of production React experience across RegTech, WealthTech, and AI-powered MarTech products at Capgemini. Shipped complex UI systems for enterprise clients including HSBC, plus full-stack capability built through Superserious — a cross-platform React Native app with AWS serverless backend, shipped to the Apple App Store.

Experience

Capgemini — Pune, India

Oct 2022 – Present

Associate Consultant (*promoted from Senior Software Developer, Mar 2024*)

MarTech Platform (HSBC) (*Jun 2025 – Present*) — Leading React development on an AI-driven advertising platform that generates compliance-reviewed banner ads.

- Architected application-wide state management using **Redux Toolkit** with Thunk middleware for async API orchestration.
- Engineered an HTML template previewer using **Shadow DOM** to isolate extracted third-party HTML/CSS from the host application, preventing style bleed across 20+ ingested templates; implemented dynamic scaling for thumbnail previews.
- Shipped a compliance review interface flagging policy violations in AI-generated ad content, with approve/reject workflows for admin reviewers.
- Delivered editable AI-generated content flows allowing users to edit and regenerate text and imagery on generated banner assets.

Aura — Wealth Management Platform (*Oct 2024 – Jun 2025*) — Portfolio management application with integrated AI wealth-advisor assistant.

- Created a custom **3D cylinder chart** React component from scratch using skewed stacked ellipses and dynamic label positioning to visualize portfolio allocation in a way standard charting libraries could not support.
- Developed 2 portfolio dashboard screens with pie, bar, and line charts using **Recharts** and **ApexCharts**, integrated with global **Redux** state for all API responses.
- Shipped response renderer components for the AI assistant chat interface, handling multiple response types (text, tables, cards) via a key-based rendering pattern.

RegLens — Regulatory Compliance Platform (*Oct 2022 – Sep 2024*) — Internal product piloted with HSBC to help enterprises track regulations and report compliance data (e.g., CO₂ emissions) to regulatory bodies.

- Created an interactive **world map visualization** covering all 190+ countries using inline SVG with country-code-based color mapping and hover interactions, enabling compliance teams to assess global regulatory density at a glance.
- Architected a complex reusable data-table component supporting rowspan, sticky columns, horizontal scroll, multi-filter controls, and pagination — reused across 3 production screens.
- Diagnosed and resolved severe input-lag in a 500-row editable table by decoupling form state from table state and persisting only diffs, reducing perceptible input latency to near-instant.
- Led the UI workstream of 4–6 React developers (unofficially); conducted project onboarding and React/Redux KT sessions for multiple joiner cohorts of 2–6 engineers.
- *Recognized with the Capgemini Rising Star Award (Q1 2023) for outstanding contribution within the first year of joining.*

Projects

Superserious — White-Label Community & AI Assistant Mobile App | *React Native, Expo, Node.js, Express, WebSockets, AWS*

- Sole engineer building a cross-platform mobile application with content sharing, AI assistance, and community features; submitted to the Apple App Store.
- Designed and implemented the full backend on **AWS serverless** using Lambda, API Gateway, DynamoDB, and Cognito for authentication.
- Implemented real-time features over **WebSockets** using a Node.js/Express service layered on top of the serverless stack.

Technical Skills

- **Languages:** JavaScript, TypeScript, HTML5, CSS3
- **Frontend:** React, Next.js (App Router), React Native, Redux Toolkit, React Router, Tailwind CSS, Recharts, ApexCharts, Shadow DOM, SVG
- **Backend:** Node.js, Express, WebSockets, REST APIs
- **Cloud & Infra:** AWS (Lambda, API Gateway, DynamoDB, Cognito, S3), Expo
- **Tools:** Git, GitHub, VS Code, Chrome DevTools, Figma

Education

PES University — Bangalore, India

2018 – 2022

B.Tech in Electronics and Communication Engineering | CGPA: 7.6
